EDUCATION

University of Florida: Bachelor of Science

Major in Computer Science, Minors in Economics & Business Administration
GPA: 3.79, Honors College

Gainesville, FL

MAY 2025

Relevant Coursework: Advanced Programming Fundamentals (Java & C++), AI in Modern Society, UX Design, Intro to Machine Learning

Professional Development Certificates: Responsive Web Design, JavaScript Data Structures & Algorithms (freeCodeCamp), Intro & Intermediate Android App Development (CodePath), AWS S3 (Udemy)

Awards and Achievements: HSF Scholar of the Year Semi-Finalist (2025), HSF Scholar (2021 - 2025), HSF STEM Summit Mentor (Sep 2024), HSF STEM Summit Scholar (Sep 2023), Florida Bright Future's Scholar (Aug 2021), High School Valedictorian (May 2021)

SKILLS

Technical Skills: C++, Python, Java, JavaScript, TypeScript, Unity, Frostbite, SQL, React, Kotlin, HTML, CSS

Project Management Tools: Git, Perforce, GitHub Projects and Issues, Agile, Scrum, Jira, Jaas

Languages: English, Spanish

EXPERIENCE

Electronic Arts

Software Engineer | EA Sports Academy

Orlando, FL

MAY 2025 - PRESENT

- Software Engineer in the Modes team for College Football 26 and 27. Led efforts in re-documenting telemetry usage, fixed 30+ bugs in CFB 26, and led some back-end development for the game's signature dynasty feature in 27.
- Engaged in modules that taught us about various aspects of game development, including the game development framework, systems, modes and UI, gameplay and animation, among others. Led group assignments among academy participants to successfully implement new screens and RPC commands in-game.

Software Engineering Intern | Madden SHIELD Team

MAY 2024- AUG 2024

- Using **Perforce** and **C++**, completed a **dozen** of single integrations, debugged around **half a dozen** issues in the game through **Visual Studio** and internal test result tools, and shadowed engineers on the infrastructure (SHIELD) team on complex integrations and debugging.
- Led the development of the 'Dungeon Keeper' web application, designed to streamline the developer kit leasing process. This involved writing the tech brief documentation for the process, implementing the **React** front-end, **Python Flask** back-end, **C#** implementation for live data pull using internal libraries, task scheduling through **Linux cron** and various shell scripts, and wrap up documentation for production and handoff.
- Conducted code reviews for my intern project through **SWARM** and **GitLab**, iteratively improving documentation, and ensured project readiness for production.

Google

Software Engineering Intern | Google Cloud Storage - Encryption

Seattle, WA

AUG 2024- NOV 2024

- Designed and implemented** a scalable solution to upgrade the encryption algorithm from AES-128 to AES-256 for 8 billion data points within Google Cloud Storage, leveraging internal tools analogous to VS Code, Git, C++, Apache Beam, and Kubernetes.
- Authored and presented** a detailed 10-page design document outlining project architecture, constraints, and implementation plans to cross-functional stakeholders.
- Submitted and iterated on 15+ pull requests** (~150-200 lines each) to the main branch, incorporating team feedback to ensure code quality and alignment with project goals.
- Facilitated weekly code review meetings** with encryption team members to reinforce best practices, improve code quality, and align on technical decisions.

CodePath

Tech Fellow | Android App Development, Advanced Technical Interview Prep

San Francisco, CA (Remote)

JAN 2023- AUG 2024

- Increased university outreach by **150%** for students and **75%** for tech fellows through marketing and training.
- Taught around 40 students in class sessions for 10 weeks for each course, and, encouraging the **UMPIRE** method, resulted in a 70% improvement in problem-solving efficiency and technical interview preparation.
- Hosted office hours weekly, aiding 10-15 students in more in-depth problems and preparation

INVOLVEMENT

University of Florida: Undergraduate Research

Research (PRIMME AI Model)

Gainesville, FL

JAN 2023 - PRESENT

- Contributing to the study of material grain microstructure growth using AI simulation techniques, proficiency in **PyTorch** and **TensorFlow**, and optimized code for statistical analysis and plot generation.
- Conducted **5 to 10** standardized benchmarks on the 3D model to validate its accuracy against real-world data.
- Refactored repository and shared it with a class about the topic, leveraged **NiceGUI** to make user interface about the program.
- Presented results in the annual SHPE UF research symposium.

ColorStack UF

Vice-President - Administration Officer

Gainesville, FL

AUG 2023 - MAY 2024

- Developed and maintained organizational resources including notes, forms, and guidelines for officers and members.
- Restructured the Executive Board to increase event productivity, resulting in **17** events planned for Spring compared to 6 for Fall.
- Implemented tangible guidelines for selecting new board members and a merit system to ensure accountability.
- Assisted the President in securing partnerships with industry leaders such as **Capital One**, **SEO Tech Developer** and **Bloomberg**.
